DETAILED ACTION

Response to Argument

Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Thiessen et al (US 6297657).

As to claim 1, Thiessen et al discloses (figs 3 -6)

A vertical probe card (figs 3 -6) having vertical probes (26, 28) for use in measurement of electric characteristics of the objects (14) of measurement including

A main substrate (30) forming conductive patterns, a plurality of probes (26,28) drooping vertically from main substrate (30), and a probe support (40) provided at the back side of main substrate (30) for supporting probes (26, 28), wherein

probe support (40) is disposed parallel to main substrate (30), and has an upper guide plate (42) and a lower guide plate (44) for supporting the probes (26, 28) by passing the through holes (43, 45) opened in each, said lower guide plate (44) is composed of a plurality of laminated substrates (44, 58, 56), and said plurality of substrates (44, 56, 58) can be separated one by one from the lowest layer to keep a necessary length of a leading end contact part of probes in case of wear.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jimmy Nguyen at (703) 306-5858. Any inquiry of a general nature of relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 305-4900.
